EDUCATION

University of Washington, College of Engineering

Sep. 2023 – Jun. 2027

Bachelor of Science in Mechanical Engineering: Mechatronics; GPA: 3.60/4.00

Seattle, WA

- **Coursework:** Fluid Mechanics, Thermodynamics, Heat Transfer, System Dynamics, Mechanics of Materials, Materials Science, Manufacturing Processes, Circuits, CAD and GD&T
- **Honors:** Annual Dean's List 2023-2024, Quarterly Dean's List Winter 2025, Spring 2025, Winter 2026

EXPERIENCE

Mechanical Engineering Intern

Oct. 2025 – Dec. 2025

Autev

Seattle, WA

- Designed enclosures and structural housings in SolidWorks, iterating on geometry and tolerances for fit and manufacturability
- Built and tested prototypes to validate design decisions, debugging mechanical and integration issues
- Collaborated with cross-functional engineering team including electrical and software engineers

Junior Aerodynamic Performance Analyst

Oct. 2023 – Jun. 2024

Design Build Fly @ University of Washington

Seattle, WA

- Designed wing configurations and fowler flaps for the Orca aircraft using OpenVSP and XFRL5, optimizing NACA airfoils for turning radius and takeoff distance across Missions 2 and 3
- Developed MATLAB scripts to automate parameter sweeps and analyze lift, drag, and stability data across 15+ design iterations
- Conducted 5+ hours of testing in UW's 3x3 wind tunnel and built physical test models to validate CFD simulation results
- Collaborated with structures and manufacturing subteams through full design cycle from concept to competition flight
- Contributed to team placing 3rd out of 106 teams at the 2024 AIAA Design/Build/Fly competition

PROJECTS

Stirling Engine | Lathe, Mill, Bandsaw, Manual Machining

Apr. 2026 – Jun. 2026

- Machining power piston, piston rod, crank journal, and cylinder base to tight tolerances from tool steel and brass using lathe, mill, bandsaw, and hand tools
- Translating CAD drawings into process plans with sequenced operations, tool selection, and tolerance documentation
- Assembling and testing functional Stirling engine with team for inter-section competition

Project BatNAV | SolidWorks, PCB Design, Arduino, 3D Printing, Laser Cutting

Jun. 2021 – Jun. 2023

- Designed and built a wearable electromechanical device integrating sensors, actuators, and embedded computing
- Developed compact housing using CAD, 3D printing, and laser cutting to meet weight and geometric constraints
- Designed custom PCB integrating ultrasonic sensors, vibration motors, gyroscope, accelerometer, and Arduino microcontroller
- Conducted iterative prototyping and testing to validate sensor accuracy and system reliability
- Received Open Source Hardware License for fully documented, reproducible design

ADDITIONAL EXPERIENCE

Portfolio Management Analyst

Oct. 2024 – Apr. 2026

University of Washington Investment Group

Seattle, WA

- Managed two funds totaling \$80k AUM, analyzing performance data and presenting investment recommendations
- Built Excel models for portfolio tracking and quantitative analysis

TECHNICAL SKILLS

CAD & Simulation: SolidWorks, Autodesk Fusion 360, OpenVSP, XFRL5, MATLAB

Analysis: Aerodynamic Simulation, Wind Tunnel Testing, Data Analysis, Python, Java

Fabrication: Lathe, Mill, Bandsaw, Manual Machining, 3D Printing, Laser Cutting, Soldering

Other: Technical Documentation, GD&T, Microsoft Office
